Integrating EDI with your Business

Task Performance Group's B2B E-commerce MegaXML Solutions for Supply Chain Now utilizes Cloud Operating System Delivering Greater Efficiency Through Microsoft Azure

Arlington Heights, IL. – September 15, 2015 – Task Performance Group (TPG) today announced introduction of MegaXML Cloud Operating System (MCOS) for its MegaXML B2B E-commerce solutions on the Microsoft Cloud Platform. MCOS allows clusters of VM instances to be kept busy, resulting in efficient utilization of available Azure IaaS resources. Utilizing Azure, MCOS controls and distributes for processing EDI, EDIFACT and XML business documents to available VM instances. While business documents are being processed by multiple servers, MCOS continues to record and provide utilization of each VM instance for monitoring and evaluation of consumed resources. The improved efficiency of VM instances utilization provides MegaXML Multi-server processing more reliability while reducing cost.

“B2B E-commerce system with high volume of documents – processing multiple files on Multi-server platform to produce invoices and shipping documents reliably and accurately, requires complete control on work distribution to the clusters of VM instances,” said Mushtaq Merchant, CEO of Task Performance Group. “MCOS provides such reliability on Microsoft Azure,” he continued, differentiating MegaXML with available solutions on the market.

“Utilizing the flexibility of the Azure platform, Task Performance Group implemented its own operating system to get maximum throughput from clusters of VM instances; therefore, they further reduced operational expenses,” said Venkat Gattamneni, Group Product Marketing Manager, Microsoft Azure.

Innovative technologies are the blueprint for adaptable and flexible open standard-based architecture for developing secure, enterprise-scale supply chain efficiency solutions. Through EDI, EDIFACT and XML integration with SAP, Oracle, Microsoft Dynamics and IBM technology platforms, MegaXML B2B E-commerce solutions moves IT architecture to higher levels of adaptability - transforming supply chain into real-time providing robust solutions.

About Task Performance Group, Inc. (TPG)

Task Performance Group provides B2B E-commerce solutions for EDI and XML integration with ERP and legacy systems using its flagship software MegaXML on a variety of platforms including SAP, Oracle, Microsoft, IBM. TPG provides MegaXML Software-as-a-Service (SaaS) platform for hosted and managed, on-demand and real-time solutions. Task Performance Group combines proven open standards-based technologies, B2B E-commerce processes integration expertise with solid software foundation and services to provide automation in reducing barriers to supply chain integration with ERP and legacy systems.
